Skin Texture

Laser scar treatment is a great option to improve the appearance of **unwanted scars**, especially **acne scars**. This treatment is quick and easy, with minimal downtime and visible results.

How does it work?

Microbeam pulses of non-ablative laser (1540 nm) energy is delivered to the treatment area. This process stimulates **collagen** and **elastin** production, creating volume and improving the skin's texture and appearance.

What results can I expect?

You can expect to see an overall improvement in the smoothness/ texture of the skin, decreased appearance of scars and pigment, and an enhancement of the skin's complexion*. A series of treatments may be required for desired results.

Treatment plans can be adjusted to fit your lifestyle.

Schedule your treatment session today.**

*Individual results may vary and are not guaranteed.

** Laser consultation fee waived with the purchase of a treatment.
