Leg Vein Sclerotherapy (Injections):

\$300 for 1 treatment **OR \$800**
for 3 treatments

 **SAVE \$100!**

To Do Before:

 Inform your doctor if you are taking any blood thinners or have a history of bleeding or clotting disorders. Continue all medications as directed and avoid alcohol.

To Do After:

 Use a gentle moisturizer, healing ointment, and compression stockings. Elevate the treated areas, and use sunscreen. Avoid alcohol.

- After care guide will be provided post-treatment
- Prices vary depending on severity

Unwanted leg veins are a common cosmetic concern.

With laser treatment, you can diminish the appearance of **leg veins** without the pain of surgical treatments and lengthy downtimes. You no longer need to cover your legs - show them off with laser leg vein removal.

How does it work?

Laser light (1064 Nd:YAG) targets and heats the blood vessels in the leg that cause spider veins without harming the surrounding tissue. The laser delivers its energy in one smooth gentle pulse. Laser leg vein removal may be combined with **leg vein sclerotherapy**, hypertonic saline injections that causes the blood vessels to collapse and fade away. To achieve optimal results, your doctor can recommend which works best for you.

What results can I expect?

You can expect to see an improvement in the appearance of your leg veins immediately following the first treatment* **. However, more than one treatment session is often needed.

Schedule your treatment session today*.**

*Individual results may vary and are not guaranteed.

**Please tell your doctor if you have any bleeding disorders, a history of blood clots, or are currently taking blood thinning medications.

***Laser consultation fee waived with the purchase of a treatment.
