Tired of constantly shaving and waxing unwanted facial and body hair?

With light-based hair removal you can uncover the touchable skin you've always wanted. All you need is a few simple treatments to get lasting results. The secret lies in the technology that targets and **destroys hair follicles** responsible for excess hair growth without harming the surrounding skin. Treatment areas include the **face, underarms, legs, back, bikini, and chest.**

How does it work?

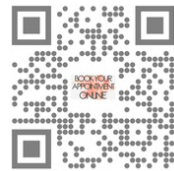

The MaxR handpiece filters light into specific wavelengths of intense pulsed light that targets and destroys hair follicles responsible for hair growth without causing damage to the surrounding skin.

What results can I expect?

You can expect to see a gradual decrease in hair density and a reduction in the amount of hair in the area. You may also expect to see a significant reduction of post-shaving bumps*. Since this treatment only targets pigmented hair in the active phase of growth, multiple treatments are often needed for desired results.

Schedule your treatment session today**.

*Individual results may vary and are not guaranteed.

** Laser consultation fee waived with the purchase of a treatment.
