Watch your nails improve in just a few treatments.

With laser nail fungus treatment, you can improve the appearance of unsightly nails. By targeting **fungal organisms**, this technology heats and kills the fungus and improves the appearance and health of broken, brittle nails.

How does it work?

Tiny pulses of laser light (1064 Nd; YAG) target and heat the nail layers affected by the fungus, thus destroying the fungal organisms responsible for the infection. The laser leaves the surrounding skin and healthy nails unharmed.

What results can I expect?

You can expect to see an improvement in the appearance of the nails, as well as a decrease in fungal colonization. A series of treatments may be required for desired results.

Schedule your treatment session today.
