# 1 TREATMENT

Why solve one skin problem when you can solve three?

The Max V/ Fraxel light/ laser treatment is the proven way to improve acne, pigmentation, and acne scarring all at the same time.

## It's Safe.

Gentle, non-invasive light/laser procedure

## It's Quick.

30-minute treatment

## It's Convenient.

Minimal downtime

## It's effective.

*You'll be amazed by the improvement in your complexion\*.*

# 2 PASSES

How does this treatment work?

This procedure is exclusive to the clinically proven Icon™ laser. It is performed in two steps, or “passes”:

The **first pass** treats discoloration and acne using a technology called Intense Pulsed Light, or IPL. IPL targets the acne causing bacteria and the sebaceous glands.

The **second pass** uses Icon’s “microbeam” laser technology that gently renews the skin by generating collagen and elastin—keys to the support structure of our skin. This results in the improvement of acne scars and other surface imperfections.

How will it feel?

During this treatment, most people feel only minimal discomfort. After the treatment, you may experience some minor redness and swelling similar to a mild sunburn.

## Ask your doctor whether this treatment is right for you.

**Schedule your treatment session today\*\*.**

\*Individual results may vary and are not guaranteed.

\*\* Laser consultation fee waived with the purchase of a treatment.

# 3 BENEFITS

Improve pigmentation, acne and acne scarring.

Only this treatment addresses all these conditions in one procedure. A typical course of treatment involves one to three procedures at one-month intervals. Your doctor will recommend a treatment plan that’s right for you.

When will I see results?

You will see continuing improvement in the skin’s appearance during and after a course of treatment, with visible results after each treatment. Acne and pigmentation should gradually fade in a few weeks. Overall texture and acne scarring should improve progressively over six months as your skin naturally responds to the treatment.
